Introduction

PetCaretopia is a web application that connects pet owners, shelters, and service providers.

It helps users adopt pets, book services like grooming or veterinary visits, and interact through a social platform.

The goal is to digitalize and simplify pet care for all stakeholders.

Problem Statement

- Pet owners often struggle to find reliable service providers near them.
- The adoption process is still manual and unorganized.
- Shelters have limited ways to promote pets.
- There is no centralized platform combining services, adoption, and pet community features.

Solutions

Our app solves these problems by:

- Providing location-based service discovery.
- Enabling online pet adoption requests and approvals.
- Creating a social community for pet lovers.
- Offering a complete booking and rating system.

Modules

Authentication & Roles

Pet Management
